& Busey

What Level Are You At?

Level 1

Level 2

Level 3

Level 4

Level Qualifiers

- Greater than 6M credit card transactions per year
 - Any company that has been compromised
- Between 1-6M credit card transactions per year
- Between 20K and 1M e-commerce credit card transactions per year
- Less than 20K e-commerce credit card transactions per year
 - Less than 1M traditional credit card transactions

PCI DSS Requirements

- Annual on-site PCI Data Security Assessment
 - Quarterly external network vulnerability scans
- Annual PCI DSS Self-Assessment Questionnaire
 - Quarterly external network vulnerability scans
- Annual PCI DSS Self-Assessment Questionnaire
 - Quarterly external network vulnerability scans
- Annual PCI DSS Self-Assessment Questionnaire
 - Quarterly external network vulnerability scans

To Be Validated By

- Qualified Security Assessor Internal Audit (with report signed by company officer)
 - Approved Scanning Vendor
- Merchant
 - Approved Scanning Vendor
- Merchant
 - Approved Scanning Vendor
- Merchant
 - Approved Scanning Vendor

AGENDA

- Industry Background
- Organizations Goals
- Organizational Challenges
- Strategies to Reduce Risks and Costs
- Q&A

Under Armour says data breach affected about 150 million MyFitnessPal accounts

- The breach affected an estimated 150 million users of its food and nutrition application, MyFitnessPal.
- The investigation indicates that affected information may include usernames, email addresses, and hashed passwords.

Macy's is warning customers that their information might have been stolen in a data breach

Mary Harbury Jul 19, 2018, 2:58 PM

- Macy's has been hit by a data breach.
- The department-store chain, which also owns Bloomingdale's, warned shoppers that their personal details and, in some cases, credit-card information, could have been accessed by a third party.

What's The Fine for Non-Compliance?

Duration	Level 1	Cumulative Level 1	Level 2	Cumulative Level 2
One to Three Months	• \$10,000 Monthly	• \$30,000	• \$5,000 Monthly	• \$15,000
Four to Six Months	• \$50,000 Monthly	• \$180,000	• \$25,000 Monthly	• \$90,000
Seven+ Months	• \$100,000 Monthly	• \$450,000	• \$50,000 Monthly	• \$240,000

Breach Consequences- Even if a company is 100% PCI compliant and validated, a breach in cardholder data may still occur. Cardholder Breaches can result in the following losses for a merchant.

- Suspension of credit card acceptance by a merchant's credit card account provider
- Loss of reputation with customers, suppliers, and partners
- Possible civil litigation from breached customers
- Loss of customer trust which effects future sales

What's The Typical Cost Of A Breach?

(Not So) Fun Facts:

- Average Merchants, at time of compromise, were **NOT** compliant with 47% of PCI-DSS Requirements
- 39% of organizations were breached through insecure remote access
- Verizon's Forensic Team(10+yrs) have never found an organization fully compliant at the time of a breach

How's The Typical Cost Calculated?

Discovery & Immediate Response:

- Forensics, Investigation
- Assessment of Impact
- Communication & PR Outreach
- Prep Notices
- Updated Call Center & Emp Training

Aftermath Activities:

- Audits, Consulting
- Legal Services, Defense & Compliance
- Discounts offered
- ID Protection Services
- Lost Customer Business
- Customer Acquisition

Final Analysis:

- Direct Costs: As, mostly, described above
- Indirect Costs: Amount of time, effort & org resources redirected
- Opportunity Costs:
 - Deflated Business Projects
 - Evaporated Business Initiatives
 - Revamped Marketing Efforts

Payment Ecosystem: Authorization Flow

1. Cardholder makes a purchase

2. Merchant swipes card, sending authorization request to acquirer (credit card processor.)

3. Acquirer sends authorization request to Visa MasterCard.

4. Visa MasterCard forwards requests to card-issuing bank.

5. Issuer Bank sends response to Visa MasterCard.

6. Visa MasterCard forwards response to card-issuing bank.

7. Acquirer forwards response to merchant.

8. Merchant completes transaction.

Description of Roles & Relationships

Issuing Banks

- Issue credit and debit cards to cardholders
- Authorize payment transactions and settle with merchants
- Receive payments from card holders

Major Credit Card

- Each major brand has its own data protection program
- Oversees enforcement of PCI DSS compliance
- Issue fines to acquiring banks (acquirers & processors)

Acquiring Banks & Credit Card Processors

- Process payment card transactions
- Server as proxy for brands to enforce PCI DSS compliance
- Issue and collect fines from merchant & service providers
- **Service Providers:** Process, store or transmit payment card data on behalf of merchants

Merchant

- Classified as L1-L4 based on credit card transaction volume
- All merchant levels have to comply with the PCI DSS
- Validation procedures vary by merchant level
- **Service Providers:** Process, store or transmit payment card data on behalf of merchants
- **Assessor/Consultant:** Qualified Security Assessor
Approved Scanning Vendors
Third-party Consultants

Overview of PCI-DSS Categories

<p>Build and Maintain a Secure Network</p> <ol style="list-style-type: none">1. Install and maintain a firewall configuration to protect cardholder data2. Do not use vendor-supplier defaults for system passwords and other security parameters	<p>Implement Strong Access Control Measures</p> <ol style="list-style-type: none">7. Restrict access to cardholder data by business need to know8. Assign a unique ID to each person with computer access9. Restrict physical access to cardholder data
<p>Protect Cardholder Data</p> <ol style="list-style-type: none">3. Protect stored cardholder data4. Encrypt transmission of cardholder data across open, public networks	<p>Regularly Monitor and Test Networks</p> <ol style="list-style-type: none">10. Track and monitor all access to network resources and cardholder data11. Regularly test security systems and processes
<p>Maintain Vulnerability Management Program</p> <ol style="list-style-type: none">5. Use and regularly update antirust software6. Develop and maintain secure systems and applications	<p>Maintain an Information Security Policy</p> <ol style="list-style-type: none">12. Maintain a policy that addresses information security

Common Drivers for PCI-DSS Compliance

- Increased awareness and general concerns over data privacy
- Significant fines and penalties that can be imposed by credit card brands (including expulsion from programs)
- Potential reputation and brand damage, leading to loss of revenue
- Concerns over civil liability resulting from customer identity theft
- Industry peer pressure
- Alignment with corporate risk management guidelines

Why Companies Struggle to Comply?

- View compliance as “an IT problem”
- Lacking a clear definition of payment environment that is in scope for PCI DSS certification
- Underestimating the extent and complexity of PCI DSS compliance
- Controlling logical access to systems containing payment card data
- Logging and monitoring events
- Protecting stored payment card data
- Putting PCI DSS contractual language in place for third-party service providers
- Obtaining management support for scalable remediation solutions
- Taking siloed approach to compliance
- Placing too much reliance on the QSA

An Approach to Attaining PCI-DSS Compliance

- Define the relevant in-scope environment
- Assess risks without this environment using the PCI DSS as a controls framework
- Remediate identified vulnerabilities according to risk prioritization
- Assist in implementation of a program to maintain the controls framework and facilitate certification on an ongoing basis (analogous to implementation of an information security management system for an ISO 27001 certification).

5 Strategies for Reducing the Risk & Cost of Compliance

Reduce or eliminate the user of payment card data

Purge payment card data

Redesign the payment environment

Outsource payment processing

Consolidate and centralize

THANK YOU!
